Putting advanced technology and innovation to work

Philips monitors brings you the latest technology in eye catching suit. Live colors will delight your eyes and SoftBlue technology is carrying about your health. USB-C docking smash wires from your table and IPS advanced technology deliver Vivid colors in wide view angle.

SoftBlue

Technology SoftBlue LED technology uses smart technology to reduce harmful shortwave blue light without affecting the colour or image of the display. SoftBlue LED technology is certified by international testing organisation TUV Rheinland to reduce harmful blue light.

Quantum Dot Color technology

Reveal the true colors of everything you do! The Quantum Dot Color from QD Vision is an innovative nanomaterial technology which produces incredibly accurate, saturated color. Covering the full color spectrum that professionals use (100% NTSC/99% AdobeRGB), these 16:9 IPS Full HD monitors deliver breathtaking color for movies, videos, gaming and more. The expansive color palette is also ideal for amateur photographers, graphic design, and other creative activities.
